

IGH SLURRY SLEEVES

IGH slurry sleeves are cast in high chrome white iron under ASTM A532 CLASS III TYPE A specification. The sleeve is hardened by means of heat treatment and machined to close tolerances.

Advantages:

- * Improved wear life as compared to stainless steel surface hardened sleeves.
- * High corrosion resistance due to its high chromium content.
- * Longer hours of operation means less downtime for maintenance.
- * Reduced stock level requirements.
